DETAILED ACTION

Reasons for Allowance

The claimed yeast composition and method for preparing a yeast composition instantly claimed is neither taught nor reasonably suggested by the prior art of record. Applicant have demonstrated and EMF-treated yeast composition and method for its preparation and administration, whereby after EMF exposure, the EMF-treated yeast showed unexpected enhanced properties. For example page 21-22 table 2a and 2b of the specification, showed that EMF-activated yeast composition were tested and found to treat gastroparesis (i.e., by stimulating the stomach to contract by increasing the intensity of the electrical signals over both the gastric antrum and the stomach in a subject), as compared to the control yeast composition and the saline. The results demonstrated that rabbits in group AY who were given an activated yeast composition compared to rabbits of NY who were given a control yeast composition and the saline (CK) respectively demonstrated unexpected enhanced properties over groups NY and CK (see, e.g. table 2a and 2b). Furthermore, page 23 table 3 of the specification, showed that EMF-activated yeast composition were tested and found to treat gastroparesis (i.e., by decreasing gastric acid concentration and pepsin activity in a subject), as compared to the control yeast composition. The results demonstrated that rats in group AY who were given an activated yeast composition compared to rats of NY who were given a control yeast composition and the saline (CK) respectively demonstrated unexpected enhanced properties over groups NY and CK (see, e.g. table 3).
